GEOSPATIAL AUDIT
Finding Gaps in Your Data

Do You Know Where Your Data is?

Intermap's unique geospatial audit service was born from the need to ensure an organization's spatial data is complete, discoverable, accurate, up-to-date, and accessible by all agencies, departments, staff, and applications. Organizations use vast amounts of location-based intelligence data for planning purposes, and many organizations struggle with a deficient or lack of centralized strategic oversight. Other challenges include multiple data formats and inefficient systems designed to manage and display the same data to different departments.

Intermap's Approach - Enhance Usability

To seamlessly integrate geospatial data into your business processes requires a managed framework for both software and data. Our team will help your organization align practices to industry policies and standards. Additionally, the Intermap geospatial audit facilitates the review of client database design and the implementation and migration of software and data. It may include application development and overall geospatial enterprise integration.

Key Features and Benefits

Database Inventory
Centralize and organize data for easy access to location-based answers.

Quality Assessment
Identify and maintain your critical datasets, while eliminating potential duplication and outdated information.

Provide Recommendations
Leverage Intermap's extensive industry experience to optimize existing datasets and identify gaps where new efforts should be focused.

Results: Save Time, Save Money
Efficiently search, discover, and access your geospatial data saving both time and money.

Geospatial Audit Specifics

To get to a solution we must start at the beginning – to identify the challenges you are trying to overcome. Intermap starts the solution process through our geospatial audit services. The specific items reviewed include:
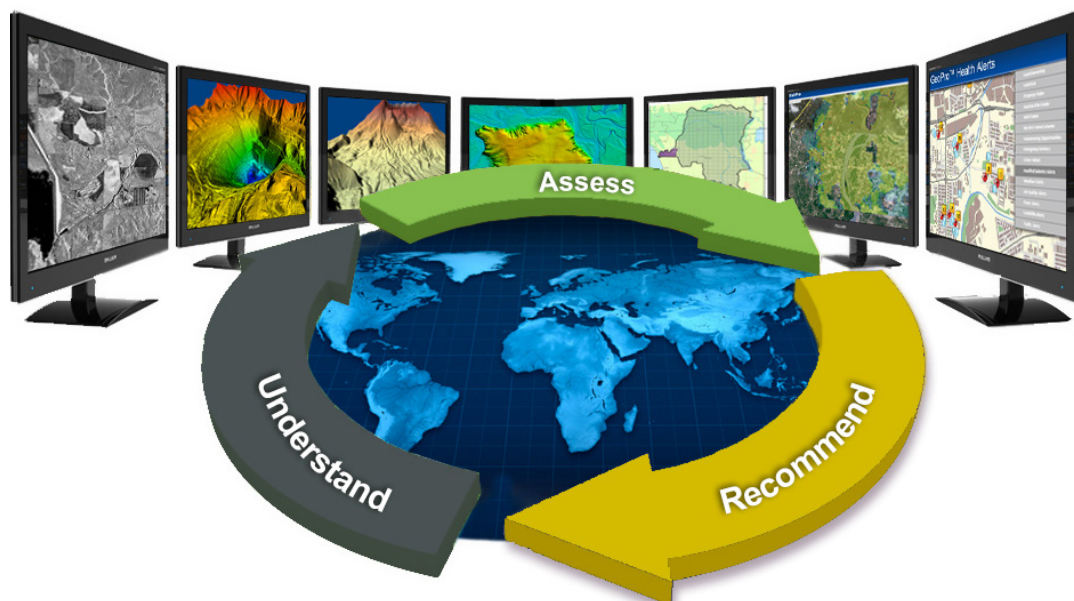

- Current and future requirements
- Concerns and challenges
- Geospatial Foundation
  - Existing Processes and Quality Control
  - Existing Data and Products
  - Existing Software and Hardware
  - Historical Projects
- Enterprise workflow
  - Organizational Structure
  - IT policies
  - Quality System Configuration
  - User Metrics and Statistics

The Intermap Geospatial Audit will delve deeper into your organization to:

- Review the existing geospatial infrastructure
- Assess your geospatial needs
- Determine what is available and what is missing
- Provide high-level recommendations to ensure greater success in your workflow and overall project
