# Values

## Global Terrain Information

### Information at any place in the world

Intermap's Values service provides precise information at any point in the world. Based upon our accurate NEXTMap foundation data products, Values retrieves accurate information at a precise location. Information includes the following, height above sea level, tree height, land cover, slope, aspect, etc. Hosted on our Intermap cloud, Values gives your business fast access to accurate information for your assets and analysis anywhere in the world without the need to manage and host data. Values is available through our web application or through an Application Programmers Interface (API).

### Key Benefits & Features

#### Global Coverage

Access Values anywhere on the globe!  
Our service is available 24-7.

#### One or Many Locations

Values can run on a single location or batch of points.

#### Simple Web Application

Easy to use app, accessible over the web by any standard browser.

#### Incredible Accuracy and details

Based on elevation with vertical accuracy up to 1m RMSE with pixel size of 1m\*.

#### Reliable and Proven

Used by tens of millions of locations worldwide across many industries.

#### Integrate into your business

Integrate profiles directly into your workflow using our APIs.

## Built on the foundation of NEXTMap

Values is generated from our highly accurate NEXTMap elevation models including NEXTMap One. Values was designed to provide specific information for only the locations that you need and can be combined with visualization layers such as hillshade. Our NEXTMap database is frequently updated providing you with the most current information.

## Low cost of ownership

Intermap's analytic services draw from a global database of over 500 million km<sup>2</sup> hosted in our secure cloud architecture. No need to pay for complicated data management systems, processing, or acquisition costs. Intermap's Values allow you to extract accurate information anywhere, for a fraction of the cost.

## Flexible Access

Analytics are available via API, for integration into your application, or via a web application. Additional data sets, online tools, and analytics are also available to perform simple analyses from any web browser and enable better terrain-based decisions without the need for any GIS software.

## Fast Results

Values provides information quickly – providing your users the information they need immediately.

Item	Specification
Service Type	Values
Locations	Up to 20 at a time
Abs Vertical Accuracy	Up to 1m RMSE (1.65m LE90)*
Subscription	Pay as you go

\*Resolution and accuracy depend on region and data set selected.

Example of Values used in infrastructure management (right) for updating assets
