Land Cover: Open Field

Values

Global Terrain Information

Detailed Information for Any Point in the World

Intermap's Values service provides precise information for any point in the world. Based upon our accurate NEXTMap® foundation data products, the information provided includes height above sea level, tree height, land cover, slope, aspect, etc. Hosted on the cloud, Values gives your business fast access to accurate information for your assets and analysis anywhere in the world without the need to manage and host data. Values is available through our web application or through an Application Programming Interface (API).

Key Features and Benefits

Global Coverage

Access the service anytime to create profiles anywhere in the world

One or Many Locations

Values can run on a single location or on a batch of points

Simple Web Application

Easy-to-use app that is accessible over the web by any browser

Incredible Accuracy and Details

Detailed terrain information with an absolute vertical accuracy of up to 1m LE90

Reliable and Proven

Used by customers worldwide in a variety of industries

Integrate Into Your Business

Integrate values directly into your workflow using our APIs

Built on the Foundation of NEXTMap

Values is generated from our highly accurate NEXTMap elevation models including NEXTMap One™. Values is designed to provide specific information for only the locations that you need and can be combined with visualization layers such as hillshade. Our NEXTMap database is frequently updated providing you with the most current information.

Low Cost of Ownership

Intermap's analytic services draw from a global database of over 500 million km² hosted in our secure cloud architecture. No need to pay for complicated data management systems, processing, or acquisition costs. Intermap's Values allow you to extract accurate information anywhere, for a fraction of the cost of owning and procuring the data to perform analysis yourself.

Flexible Access

Analytics are available via API for integration into your application or via a web application. Additional datasets, online tools, and analytics are also available to perform simple analyses from any web browser and enable better terrain-based decisions without the need for any GIS software.

Fast Results

Values provides your users the information they need immediately. Get results for up to 20 locations at a time, showing height above sea level, height of vegetation, land cover, slope, and aspect.
