

Viewshed

Global Terrain Analysis

Accurate Global Visibility Analysis

Intermap's Viewshed service provides quick and easy access to visibility anywhere in the world. Based upon our NEXTMap[®] foundation data, our Viewshed service provides highly accurate results that can be used for a variety of applications. Hosted on the cloud, our Viewshed service allows you to specify transmitter and receiver information to generate a detailed colorized viewshed without the need to manage and host data. Viewshed is available through our web application or through an Application Programming Interface (API).

Key Features and Benefits

Global Coverage Access the service anytime to create viewsheds anywhere in the world

Large and Small Areas Perform viewshed analyses from 0.1km to hundreds of kilometers in radius

Simple Web Application

Easy-to-use app that is accessible over the web by any browser

Reliable and Proven Used by customers worldwide in a variety of industries

Integrate Into Your Business Integrate viewsheds directly into your workflow using our APIs

Built on the Foundation of NEXTMap

Our viewsheds are generated from our highly accurate NEXTMap elevation models including NEXTMap One[™]. Viewsheds can be run over either a digital surface model (DSM) or a digital terrain model (DTM) with features such as buildings and trees removed. Our NEXTMap database is frequently updated providing you with the most current information.

Low Cost of Ownership

Intermap's analytic services draw from a global database of over 500 million km² hosted in our secure cloud architecture. No need to pay for complicated data management systems, processing, or acquisition costs. Across a continent or just a neighborhood, Intermap's analytics allow you to get answers and information from a huge database, for a fraction of the cost of owning and procuring the data to perform analysis yourself.

Flexible Access

Analytics are available via API for integration into your application or via a web application. Additional datasets, online tools, and analytics are also available

to perform simple analyses from any web browser and enable better terrain-based decisions without the need for any GIS software.

Fast Results

Perform visibility analysis from 0.1km to hundreds of kilometers in radius in seconds, instead of minutes or hours in commercial GIS tools.
